Full Color Mousepad™
(3mm, 7mm & 10mm)

Full ColorSOFTMousepad

Dye sublimation produces the best reproduction of printing on a cloth top mousepad. The ink that colors the mousepad becomes a part of the fabric and cannot scratch off or wear off. It does not disrupt the mouse movement because it is not ink that is sitting on top of the mousepad. This is similar to a print shirt where you can see lots of colors but cannot actually feel the ink because the fabric is dyed and it has become a part of the fiber.
Dye sublimation can produce near photo quality Mousepad with continuous tones and shades. It is printed using the CMYK process, just like a brochure is printed. This is why we ask that you send scanned artwork at a minimum 300 DPI resolution. These pads are available in 3 thicknesses (3mm, 7mm & 10mm) and a variety of sizes and shapes. So please find one that matches your needs.
